

VPN Service

**milanoteleport**
the sky is not the limit

VPN Service

By extending the user network with a satellite or 4G VPN, the control of remote sites can be centralized. Private network is a secure point-to-point or multipoint solution that provides dedicated links and bandwidth between different areas. It is an IP-based solution that provides partially mesh or star topology in which each remote station can communicate with the others through a central Milano Teleport hub (double or single hop).

- > Control centralization
- > IP-based solution
- > Communication between different remote stations
